

Staticide® Nitrile Laboratory Gloves

Latex-free Superior Stretch

ACL Staticide Nitrile Laboratory Gloves safeguard against damage caused by contamination. Manufactured for strength, these disposable gloves offer excellent stretch and comfort without plasticizers, silicone, or powders. The inherent anti-static, low tribocharging nature of nitrile offers natural static protection without additives or carbon shedding.

When defending against skin and oil contamination, nitrile has long been a reliable alternative to latex. Nitrile is safer to use for those prone to skin irritations and latex allergies. The strength and durability provides longer wear times and chemical splash protection.

Storage:

Store in a cool, dry location, away from sources of light. Avoid extreme temperatures. Recommended storage temperature 50°F - 86°F (10°C - 30°C).

9" Gloves GL9NI (100 per pack; 5 packs per case)

GL9NIE-S	Small
GL9NIE-M	Medium
GL9NIE-L	Large
