## PRESS RELEASE

### ACL Introduces #8691 Mighty Mask

ACL, Inc. introduces #8691 Mighty Mask, a fast-curing, temporary masking agent for safeguarding components during conformal coating processes and component-free areas on PCBs during soldering.

A heat-resistant compound is added to the latex for short-term, high-temperature protection up to 510°F. Will be tack-free in 20 minutes and completely cured in an hour.

Mighty Mask can be applied with a spatula or with the supplied squeeze bottle. This plastic-safe, peelable solder mask removes easily by hand or with tweezers without leaving contaminating or corrosive residues.

The formula does not contain substances on the REACH SvHC list or in the RoHS Directive 2002/95/EC.
